

TABLE OF CONTENTS

Table of contents

Essentials	11
Prologue	17
1 Where did I come from?	21
1.1 Memories of my childhood	23
1.2 A mischievous city kid	24
1.3 Helping in the family	26
1.4 My parents	27
1.5 My admiration for Professor Yukawa	29
1.6 Feeling the power of chemistry	30
1.7 The importance of physical strength and academic capability	32
2 Entering Kyoto University in the Sputnik Year	35
2.1 Moving from Kobe to Kyoto in 1957	37
2.2 Joining Keiiti Sisido's laboratory of organic chemistry in 1960	38
2.3 My first research topic: o-xylene chemistry (1960–1966)	41
2.4 The "immortal Noyori" survives an explosion.	42
2.5 Reflecting on Japan's organic chemistry in the early 1960s	44
2.6 Implications of molecular catalysis	46
2.7 Asymmetric catalysis with chiral organometallic molecular compounds	47
2.8 Birth of asymmetric catalysis with chiral organometallic compounds (1966–1968)	48
2.9 The asymmetric carbene reaction	49
2.10 Challenging a famous statement of Louis Pasteur	51
2.11 Primitive asymmetric organometallic alkylation (1968–1971)	52
2.12 Photochemistry of cyclic enones (1965–1975)	53
2.13 Receiving my PhD (Dr. Eng.) degree	55
2.14 Kyoto's Hanamachi district as a cultural classroom	55
References for chapter 2	57
3 Starting an Independent Career at Nagoya University	59
3.1 An invitation from Nagoya University	61
3.2 Meeting a giant in natural products organic chemistry	61
3.3 My memories with Satoru Masamune	63
3.4 Launching the Noyori Laboratory (1968)	64
3.5 Photo-induced Nazarov chemistry (1968–1975)	65

3.6 Lessons of transition-metal effects on reactive intermediates (1968)	67
Pursuing trimethylenemethane-metal complexes	
(Unrealized idea leading to a surprising consequence)	67
Unrealized idea II	69
References for chapter 3	70
4 A postdoctoral fellow at Harvard University	71
4.1 Joining E. J. Corey's group at Harvard (1969–70)	73
4.2 Prostaglandin synthesis and hydrogenation	75
4.3 My astonishment in encountering world-leading chemists	80
4.4 Experiencing the stimulating American society	83
4.5 A memorable one-month vacation	85
4.6 My lab in Japan	86
References for chapter 4	86
5 Three decades of OMCOS research at Nagoya	87
5.1 Fe carbonyl-promoted [3+4] and [3+2] cyclo-coupling reactions (1968–1984)	89
5.2 Transition metal catalysis of strained hydrocarbons: implications in olefin metathesis (1968–1982)	95
5.3 Starting with binaphthol chemistry: BINAL-H asymmetric reductions (1976–1980)	100
5.4 Determination of the enantiomeric ratio in the 1970s	103
5.5 Prostaglandin synthesis (1976–1989)	105
Long sought, general three-component coupling synthesis	106
Versatile vicinal carba-condensation of α,β -unsaturated ketones	110
Prostaglandin analogues	111
5.6 Transition metal catalyzed transformations of endoperoxides and epoxides (1979–1990)	115
Launching the IUPAC OMCOS symposium series	117
5.7 Chemistry of enolates: stereoselectivity in aldol reactions (the mid-1970s–the late 1990s)	119
5.8 Catalysis with organic and inorganic silicon compounds (1979–1988)	122
5.9 Nucleic acid synthesis employing organometallic chemistry (1983–1992)	126
5.10 Organometallic asymmetric alkylation (1983–1985)	130

5.11	Nonclassical chemistry with the oldest organometallics: Chirality transfer, multiplication, and amplification (1986–2000)	132
	Catalytic organozinc chemistry	132
	Nonlinear effects in asymmetric alkylation	136
	Two great masters who guided a wandering chemist	139
	Sir Derek Barton, a paternal presence	139
	Respect for Albert Eschenmoser	141
	References for chapter 5	143
6	BINAP for Asymmetric Catalysis	145
6.1	Axially dissymmetric BINAP—why and how? (1974–1977)	147
6.2	Asymmetric synthesis of amino acids by BINAP-Rh(I) catalyzed AH (1977–1980): A momentary joy followed by a nightmare	151
	Henri Kagan—A descendant of Louis Pasteur	155
6.3	A gift in return: Industrial asymmetric menthol synthesis (1982)	157
6.4	Chiral molecular catalysts: Beyond their shape (1986–2003)	161
6.5	Switching from Rh to Ru catalysts in asymmetric hydrogenation (since 1986)	162
6.5.1	General asymmetric hydrogenation of functionalized olefins: Significance of metallic elements	163
6.5.2	AH of functionalized ketones	169
	Effect of anionic ligands on reactivity	169
	Wide scope of the substrates	172
	Importance of solvents for selectivity: dynamic kinetic resolution	175
	References for chapter 6	176
7	My way to green catalysis	179
7.1	The ERATO project with generous funding (1991–1996) Synthesis of polyacetylenes	181
7.2	Asymmetric transfer hydrogenation (1992–1996)	182
7.2.1	The discovery of an unimagined catalytic system The NH effect Catalytic mechanism	184 185 185
7.2.2	An ideal asymmetric transfer hydrogenation of ketones and imines	188
7.2.3	Transfer hydrogenation/hydrogenation network	191
7.3	Advent of Ru-BINAP/diamine catalysts for AH (1995–)	192
7.3.1	My personal view on mechanistic complexity	193
7.3.2	Discovery of high reactivity in 1995	194
7.3.3	General AH of simple ketones and its mechanism AH of aromatic and hetero-aromatic ketones AH of amino ketones AH of conjugated enones	196 196 197 199

7.3.4	High flexibility of the molecular catalyst system Catalyst design to cope with the substrate diversity Asymmetric activation Kinetic discrimination of enantiomeric ketones Asymmetric hydrogenation of further difficult substrates Sympathy with Jack Halpern	203 203 205 206 208 210
7.4	Green chemistry: A responsible science for future generations (1992–)	211
7.4.1	Replacing metal hydrides by hydrogen (1995–) Chemoselective hydrogenation Diastereoselective hydrogenation	212 212 214
7.4.2	Supercritical carbon dioxide as green catalysis medium (1992–1996)	216
7.4.3	Green oxidation with hydrogen peroxide (1996–2003) Alcohol oxidation Oxidation of sulfides Olefin epoxidation	219 220 223 223
7.5	Asymmetric catalysis in the real world	229
	References for chapter 7	233
8	The Nobel Prize in Chemistry (2001)	235
8.1	A phone call from the Swedish Academy of Sciences	237
8.2	The Nobel Week in Stockholm	239
8.3	Nobel Symposia on Asymmetric Synthesis	245
8.4	A tribute to K. Barry Sharpless	247
8.5	How I was honored	248
8.6	Molecular beauty of BINAP	248
8.7	Cultural heritage nurtures scientific creativity	251
	References for chapter 8	252
9	Noyori, the chemist and Japanese citizen	253
9.1	Born and raised in Japan Being an “only one” creator Working with a group of talented collaborators Research seminars on Saturdays Meeting Hirata's expectations The tradition of natural products organic chemistry Creating a good education and research environment for Nagoya University	255 255 257 261 262 264 264 268
9.2	Expressing my gratitude to my allies	270
9.3	Leading The Society of Organic Synthesis, Japan	272
9.4	The role of awards in science	275
9.5	The Emperor as a scientist	276
9.6	Roles in academic administration and my Presidency at RIKEN My Presidency at RIKEN (2003–2015)	280 281

	My memories with Tsung-Dao Lee and Hideki Yukawa	283
	Moving to the Japan Science and Technology Agency	285
9.7	Nothing comes from nothing – thoughts about the future	285
	Paradigm change from science and technology (ST) to science, technology and innovation (STI)	286
	Our very modest contributions to the SDGs	288
9.8	My message to students and young researchers: interdisciplinary research and collective knowledge	291
	Knowledge of ignorance.	291
	Interdisciplinarity.	291
	Collective knowledge.	292
	References for chapter 9	292
Appendix		293
	Epilogue – Facts are the enemy of truth	295
	Author's Family	297
	Promotion to Professor and Marriage (1972)	297
	Acknowledgement	298
	Afterword by Eiji Noyori – The art of hexagons: memories with	
	my father	299
	My illustrated reference book cut into pieces	299
	Creativity to draw on a blank sheet of paper	299
	Encountering the demon sergeant for once	300
	A father-son press conference	301
	To end with	302
	Glossary	303
	Abbreviations	304
	Vita	306
	Chemistree	308
	Holographs	311
	Publications	316
	Table of contents	332
	Links and literature	339
	Image sources	341
	Index	342
